## Stutsman/K & B Ag Supply, LLC

- Headquartered in Hills, Iowa
- 10 locations
- Family-owned business
- Agronomy services, crop consulting, fertilizer, seed, chemical and custom application services

Responsible nutrient management is available in a dry nutrient application machine. The NL4500 G4 Edge variable rate dry nutrient applicator builds upon patented G4 spinner technology to provide a new level of precise nutrient application. The Edge allows operators to apply material along boundary lines resulting in less material in sensitive areas.

Adam Oberrenter and Barry Johnson are custom applicators for Eldon C. Stutsman and K & B Ag Supply, one of Iowa's largest supplier of ag products and services. They have in-field experience of the productivity, efficiency and control offered by the NL4500 with G4 Edge technology from New Leader.

Oberrenter and Johnson immediately recognized the benefit of the New Leader interface which comes with the ISOBUS-enabled Edge.

"I've been doing this a long time. The New Leader software is easier and more user-friendly to run than any

other on the market," Johnson said.

"I've been telling everyone they need to run this machine. It's simple and easy."

K & B Ag Supply Manager Brad Wernimont agrees.

"They hopped in the cab and in 10 minutes they were ready to go," Wernimont said.

Applying straight K and various blends of P and K, Oberrenter and Johnson achieve 80-foot spread widths at an average speed of 18 mph. Plus, with the boundary spreading function on the Edge, K & B Ag and Stutsman provide their customers with full application rates to the edge of the field in a single pass while avoiding material from being broadcast into water ways, ditches or adjacent fields.

"The spread pattern along the boundary looks like it is hitting a wall and falling right on the edge of the field," Oberrenter said.

Other improvements such as the automatic chain tensioner and

automatic oiler proved to add considerable value.

"The oiler saves us a lot of time at night when we are getting ready to put the machine away," Oberrenter said.

When it comes to overall value and performance, New Leader dominates.

"There is no comparison between New Leader and any other applicator on the market. It is a low-maintenance, high-benefit machine," Johnson said.

The NL4500 G4 Edge from New Leader. The right choice for crop nutrient application.
